Hi John-

I apologize for the late response. I hope you enjoyed your holidays. Sorry for not getting in touch with you regarding the last round of background sampling. The sampling was done November 16-20 and I'd be happy to share photos and information with you. Please let me know.

With respect to our technical stake holder group, we have been meeting with representatives from DOE, NASA, DTSC and some community members about our technical aspects of our background study. We will continue to meet on a regular 6-week basis beginning in January on background study issues as well as our radiological study of Area IV at SSFL. Please call me at the below number to discuss your interest in attending these meetings.

I believe David Cooper has been in touch with you regarding TASC. Let me know if this is not accurate.

Thanks again for your interest. Please e-mail or call me at your convenience.

Nicole

HI All,

I just got back from Thanksgiving with the family.

Did you ever do the last sampling for the off site study?

I had asked to be included in the sampling but, I never heard back from you about dates/time.

I have heard that there is a "Background Technical Group" that includes community members?? I had not heard of this. Can you get me some information on it.

Also, I had never gotten a reply on the TASC request I had made.

Peace,  
John Luker
